Download free Telerik UI for WinForms. .NET open source components and provides various development tools to build web, desktop, or server solutions that meet . Telerik Form and Document. It enables you to quickly and.Q: Python 2.7: Database Connection in Windows 7 I need to connect to my MySQL 5.6 database on a Windows 7 machine using Python 2.7. I checked with SystemScan and my database connection settings there are correct for this configuration. Also, the MySQL connection settings in Python 2.7 console are also correct. I'm using PyMySQL for MySQL connections. I'm getting this error message when I try to do a connection: Traceback (most recent call last): File "c:\Users\User\Desktop\test.py", line 1, in from pymysql import * File "C:\Python27\lib\site-packages\pymysql.py", line 5, in from Crypto.Cipher import PKCS7_Encryptor ImportError: cannot import name PKCS7_Encryptor I'd appreciate it if someone could help me out. Best, A: The line import * is causing this. If you really want to do that, add a name for the package: import mypackage. EDIT: You have a PKCS7_Encryptor (or at least that's what your error says) defined in a module. If there's a PKCS7_Encryptor module (a PKCS7_Encryptor module) with something
